Profile:

I am currently a Software Engineer with Aspire Technologies Ltd, Sandyford, and working within the Ericsson R&D department, implementing new features within 3G networks for real-time telecommunications. During my employment I have undertaken full feature development in an agile environment, developing in C++ with the advance usage of object-oriented programming in eclipse development environment. Prior to this I successfully completed a BSc in Computer Science (honours) degree achieving First Class Honours in the process. From this I obtained the relevant work experience in the area of Software Development to gain employment and successfully developed numerous programs in college using Java, C++, C#, SQL and NoSQL. I carried out 7 months' work experience with LMI Ericsson as a Software Engineer Intern. During my previous employment with O' Doherty's Audio and Video Productions before commencing college, I gained good customer relation skills, problem solving and task management skills in a commercial setting. I am looking for a position with a view to utilizing the opportunity to enhance my skills, experience and knowledge.
I hold a Full Irish Driving License.

EMPLOYMENT HISTORY AND WORK EXPERIENCE

Aspire Technologies: Sandyford, Dublin 18

Position : Software Engineer **August 2017 – Present**

Main Responsibilities

- Responsible for the delivery of high quality software to Ericsson's RNC platform, communicating within a team in an agile environment, to deliver software releases on time.
- Executing test suites on software deliverables and upgrading / adding test suites if necessary followed by documenting work undertaken and the impact of the changes.
- Duties included collaborating within a team, gathering requirements, implementation, testing, documenting and the delivery of software at set intervals.
- Other skills obtained were UML Modelling and C++ within Eclipse, advanced usage of git and gerrit software development tools and working on command line within Linux operating system.
- Excellent communication skills were required working in a team environment, listening to and understanding the features and requirements needed by the PLM in Kista, Sweden, as well as within the team in the local office. Dividing up of work and setting realistic targets for delivery intervals as well as collaborating with the team for the more complex issues. Often worked under pressure on customer TR's resolving issues and crashes within the RNC. C++ is the core language for the RNC.

Ericsson Ireland: Athlone, Co Westmeath

Position : Software Engineer Intern **February 2016 – August 2016**

Main Responsibilities

- Responsible for the development of the BOAT tool, which is a Java, Swing and SQL based tool used by customer support to track customer service requests.
- Duties included gathering requirements, coding, testing, documenting and the delivery of software at set intervals.
- Good communication skills were required working in a team environment, listening to and understanding the features and requirements needed by the customer support team. Often worked under pressure on challenging features to meet demanding deadlines.

O' Doherty's Audio and Video Productions: Unit 9 Crag Cres, Clondalkin Ind Estate, Dublin 22

Position: VT Technician **September 2006 – August 2013**

Main Responsibilities

- Job entailed travelling all over Ireland on a near-daily basis and the recording of live races onto various different media formats
- Creatively weaving together visual and audio materials created during the production process of a horse race and combining them with other media, graphics, subtitles, archive footage, etc.,
- Created a variety of final products for purchase by owners and trainers of the horses involved in races. I digitized this media and made copies for future sale and archive records.
- Vision mixing/directing, sound engineering or as a camera operator.
- Used oscilloscopes and audio meters, reading TV and video signals
- I was promoted to head of V.T. Department in O'Doherty's Audio and Visual Productions in 2008 where I developed and implemented new concepts for archiving the major race meetings onto broadcast formats over DVD.

EDUCATION & QUALIFICATIONS

Institute of Technology Tallaght, Dublin 24 **2013 – 2017**

BSc (Honours) in Computing (1.1 - First Class Honours)
Having successfully complete the mandatory modules in year 1, 2, 3 and 4. I am competent in the following **I.T. Skills**

- Confident user of Java, C++, C# and SQL and NoSQL databases.
- Can write SQL queries to intermediate level using Oracle 11G and MYSQL.
- Can design and create database schemas.
- Capable of designing, developing and deploying websites using HTML, CSS, JavaScript, Angular JS and Twitter Bootstrap.

- Design, developing and testing Android applications.
- Competent user of Windows and Linux Operating Systems in system administration and command line interfaces.
- Design build and troubleshoot a network using routers, switches and hubs.
- Configure a router using the Cisco IOS command set.
- Design programs using object orientated systems analysis and design.
- Software quality and testing techniques such as Black and White Box testing and developing unit tests.

Projects undertaken in years 2, 3, and 4

2nd Year Project – Bowling Alley Booking System 2014-2014

- Project leader in the development of a front end Java application that stored and retrieved information from a backend database.
- Features included account login and authorization
- Checked for availability at a particular time for any number of customers
- Created and stored bookings if they passed the availability checks
- Updated the graphical user interface to reflect any changes to the database
- Added members and staff with or without administrative access.

Technologies & Tools Used
Java, Oracle Database 11g express, GitHub.

3rd Year Project – Web Search Engine 2015-2015

- A search engine website built using Java Swing and SQL.
- The search engine web crawled a number of popular search engines such as Google, Yahoo, Bing and DuckDuckGo.
- It then used an algorithm to compare and remove any duplicate URL's which occurred in the result set, then sorted the results based on the search terms and keywords returning this to the GUI for the user.
- Features included user and admin login. Users could preset and save their preferred search sites and admin could add a new site to the program.

Technologies & Tools Used:
Java, Swing, MYSQL and GitHub.

4th Year Project – Android Fuel Logger Application 2016-2017

- A fuel and maintenance cost tracker application for Android phones built using Java, XML, NoSQL and JavaScript
- The data is stored in a real time cloud database allowing easy data retrieval upon login authorisation.
- Car data is auto retrieved from a web API upon the entry of a valid car registration and other inputs allow for camera or voice inputs.

- Service station location and name are auto retrieved using GPS and added to the records upon refuel data being entered.
- App can be used to generate graphs to display monthly costs and other statistics such as mileage covered and miles per gallon.
- Features include multiple vehicles can added to the application.
- Tracks vehicle service history providing reminders when an upcoming service is due.

Technologies & Tools Used:
Java, XML, NoSQL, JavaScript and GitHub

Interests & Achievements

I have a keen interest in many sporting activities including rugby, football, formula one, horse racing, darts and tennis and I proudly hold a Wicklow GAA under 16 winner's medal.
I also have a love for music and I am a regular concert goer. I play the guitar as well as having grade level 3 on classical clarinet.
I often undertake small programming projects in my own time such as bash scripts or small programs that incorporate GUI's to make some personal mundane tasks simpler.
